

THE INKiESS SYSTEM

Reading off instead of Counting

Balancing faster, easier and safer

Time is Money

Independent of how many coins are into the coin holders – coin assets can be read off the coin holder scales in matter of seconds

Absolute Counting Precision

as coins are sloping graded

Safety against Overturning

by sloping coin sections (pat.)

Inserting coins

Single coins or entire rolls will be put at the bottom or on the last coin resp.

Taking coins

by removing the last coin (or up to 5 coins at once).

Rolling and Checking coin rolls

INKiESS coin holders are featuring two innovative marks showing at what amount coins can be wrapped for rolls

(① a line from the bottom ② and an arrow from the top).

YOUR ADVANTAGE:

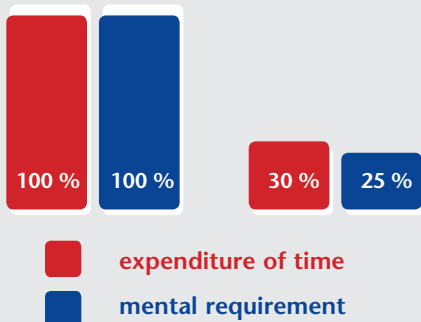

Collecting and Discounting
of cash
as a percentage

with coin bowls in
common cash
boxes or drawers

with INKiESS coin
holders and
cash trays

80 Years Sustainability

INKiESS single coin holders: long lasting, saving resources, made of high-quality recyclable plastic, easy convertible in case of new coins or for different currencies. Permanent scales inscription (no abrasion).

Components and spare parts long-term available.

Time saving and mental relief are enormous to the user.

A MODULAR SYSTEM:

The considerable INKiESS sales range – **Made in Germany** – is comparable to a large modular system and therefore extraordinary variable. Between basic models and foreign bank-note inserts to roll top cash boxes several components are always put to an ensemble according to requirements. By dint of special counting cash trays (s. p. 13) solutions for country-specific currencies are available. In case of currency change or coin modification cash boxes can easily be updated by change of coin inserts.

Despite a general tendency to cashless payment – a future without coins and banknotes is not to expect short-term. Amongst others this is due to the fact that in particular about 90 % of small amounts are still paid cash in the European region. Cash transactions are still about 50 % in most countries depending on region, branch and distribution type.
